CMS.100: AI Declaration

My track for CMS.100 is: ☐ Standard (limited use) ☐ Conscientious objector (no AI use)

This is MIT's limited use AI policy:

Students may use GenAI to support learning, brainstorming, editing, debugging, or generating explanations, but may not use it to produce full or substantial assignment solutions. This is similar to the way that a student might ask a classmate or TA for assistance. Assignments in this category should clearly specify which stages, processes or components allow and disallow use. *Prohibited uses may include: Copying full problem prompts into GenAI tools, asking GenAI to solve assigned problems, or submitting AI-generated text, code, equations, or analysis as one's own.*

Amendments: If you would like to change tracks, you may do so at any time without permission or penalty. However, you **must** submit a brief memo to crystall@mit.edu about what changed, why, and how you plan to use AI moving forward.

For AI track students

Three *specific* examples of how you would use AI for class. “Editing” doesn’t count. Instead: “I have two paragraphs that say the same thing and I want Claude to tell me how to combine the two.”

Three *specific* examples of what unacceptable AI use looks like (Conscientious objectors: what does “no AI” mean to you? Autocomplete, Grammarly, AI overview in Google search? What’s the red line?)

What would make you switch tracks and why?

For conscientious objectors

(You don't need to explain your choice not to use AI.)

What aspects of your reading or writing would you like to improve? (Not “write more clearly”—what are some of your struggles with writing and how can I best support you?)

What kinds of feedback do you find most helpful? Do you like detailed writing feedback down to little tweaks of grammar? Or do you find the bigger picture / overall commentary?

What kinds of assignments or readings would you like to see in the class? Are there specific topics, formats, etc. that help facilitate your learning (e.g., videos vs. handouts)?
